

PROPOSAL FOR TEACHERS, STUDENTS AND PARENTS

Kota Buku app. More attention to teaching.

An AI assistant to prepare lessons, understand students, handle daily tasks and keep parents informed.

LESSON GOAL

Comparing fractions

$\frac{1}{2}$

$\frac{1}{4}$

Which is larger, $\frac{1}{2}$ or $\frac{1}{4}$?

✓ Chosen by the teacher

More attention to teaching, with students and parents included.

For Standard 1 to Form 5. Teachers use the supplied iPad; students can join in on paper without a device. Families use their own devices for permitted online access.

Teacher

Prepare lessons and handle daily tasks. Turn students’ answers into a clear picture of who needs help, what they find difficult and what to teach next.

Students

Practise on paper or online. Get exercises and explanations chosen by the teacher for difficult topics, and more challenging work when ready.

Parents

See what your child is learning, what they find difficult and what the teacher recommends practising next.

What the teacher prepares can support the whole lesson.

One topic, prepared once, carries through teaching, checking, support and the family summary; the teacher still reviews and decides, and official school systems are updated separately at first.

- 01 Prepare
- 02 Teach
- 03 Check
- 04 Support
- 05 Share

STEP 01 OF 05

Prepare

Choose the topic; the template fills the plan and the app drafts practice; the teacher edits and approves.

- ✓ Template filled from the goal
- ✓ Two practice options drafted by AI
- ✓ You edit and approve

The teacher reviews and decides at every step

LESSON PLAN

Comparing fractions

Success criteria	Students can say which of two fractions is larger and show why.
------------------	---

Activities	Warm-up with fraction bars, then practice with visual support.
------------	--

Option A **AI draft**

Teachers can start with a lesson goal, not a blank page.

The teacher chooses what students should learn today; everything that follows is prepared from that one choice.

Choose today's lesson goal

MATHEMATICS

- ☐ Read and write simple fractions
- ☐ Compare fractions with the same denominator
- ☒ Compare fractions with different denominators
- ☐ Add fractions with the same denominator

The lesson-plan template and the practice drafts on the next screens all start from this goal.

Continue

The app provides a daily lesson-plan template, known as RPH, and helps draft practice material using artificial intelligence (AI).

I chose the goal. The template filled the plan; artificial intelligence drafted two practice options for me to review.

5 DRAFTS, 2 TO REVIEW

TEACHER ASKED Draft practice options for this goal.

Option A: with visual support

Compare $\frac{1}{2}$ and $\frac{1}{4}$ with equal-length bars.

AI draft

Review

Option B: more challenging

Compare $\frac{3}{4}$ and $\frac{2}{3}$, then explain.

AI draft

Review

You choose what the class gets. Nothing goes to students until you approve it.

Delivered by Sifututor. Powered by Learnest Lab. Kota Buku is the intended proposal context, not an awarded contract. Proposed solution. Screens are concept illustrations; examples are synthetic; people in images are generated.

Students can work towards the same learning goal with different support.

Both options come from the same goal. The teacher decides which each student works on, and can edit either one.

LESSON GOAL

Compare fractions with different denominators

OPTION A

With visual support

Which is larger, $\frac{1}{2}$ or $\frac{1}{4}$? Shade the bars, then circle the larger fraction.

Both bars are the same length, so the shaded parts can be compared directly.

Use

Edit

Redraft

✓ Chosen by the teacher

OPTION B

More challenging

Which is larger, $\frac{3}{4}$ or $\frac{2}{3}$? Explain how you know.

Same goal, no picture given. Students choose their own way to compare.

Rule-based flag

5 of 30 students missed comparing different denominators in the last 3 checks

Ask the assistant

Tap a question

Who needs help with fractions?

What should I reteach?

Group students for practice

AI draft

Five students missed comparing fractions with different denominators in the last three checks: Aiman, Haziq, Priya, Amirah and Danish. The rest of 4 Bestari is secure on same-denominator comparisons. Suggested: a small-group session with fraction bars, then a ten-item practice for those five.

✓ Decision recorded by the teacher: Small group

Teaching decisions remain with the teacher.

The same assistant drafts the routine admin work from the data already collected.

Attendance, notices to parents and summaries for the school are pre-drafted from records and templates; the teacher reviews, edits and approves before anything is sent.

WHERE IT STAYS

Under the school and ministry, processed and stored in Malaysia by design, used only for the stated purposes.

2

A QUESTION THE TEACHER ASKS

Which students need extra help before the adding-fractions unit, and what should they practise?

Ask

3

SAMPLE OUTPUT

AI draft

Aiman, Haziq, Priya, Amirah and Danish: a ten-item practice set drafted from their own wrong answers on different denominators, ready for your review.

WHAT COMES BACK

✓

A progress record for every student, by topic

✓

A class report for the school, drafted from the records

✓

Targeted practice for students who need help, drafted by AI, approved by you

✓

A term summary for parents

OVER TIME

The same records can feed the school's own reports and, with the school's and the ministry's approval, stand in for the printed report card.

Delivered by Sifututor. Powered by Learnest Lab. Kota Buku is the intended proposal context, not an awarded contract. Proposed solution. Screens are concept illustrations; examples are synthetic; people in images are generated.

Parents can understand their child's progress through a clear summary.

On their own phone, parents see a teacher-curated summary, attendance and announcements for their own child; older students can be given limited access to their own summary, younger students see it with a parent.

Summary from the teacher

Aiman Hakim, 4 Bestari

This fortnight

PRACTISED

Comparing fractions, three practices

SHARED BY THE TEACHER

Understands fractions with the same denominator; needs more practice comparing different denominators.

ATTENDANCE

My progress

Adam Firdaus, Form 2 Amanah

FEEDBACK FROM YOUR TEACHER

Good work on linear equations. Next: simultaneous equations, use the substitution method.

NEEDS ATTENTION

Simultaneous equations

GOING WELL

Linear equations and indices

Access follows age rules and school policy

For older students

When age-appropriate, students can also see their own progress: limited access to their own summary and the teacher’s feedback, on their own device.

✓ Feedback from your teacher

✓ Needs attention

✓ Going well

Younger students see the summary together with a parent. Access follows age rules and school policy. Shared periodically, not a live feed.

Delivered by Sifututor. Powered by Learnest Lab. Kota Buku is the intended proposal context, not an awarded contract. Proposed solution. Screens are concept illustrations; examples are synthetic; people in images are generated.

Kota Buku content can support everyday teaching, beyond reading alone.

In the proposed expansion, a teacher picks a page or chapter and gets help drafting practice and discussion questions from it, subject to content permission; early preparation starts from public curriculum documents.

Expansion subject to content permission

1

CHAPTER 4: FRACTIONS

Page 52, comparing fractions

When two fractions have different denominators, we can compare them by drawing bars of the same length, or by finding a common denominator. One half is larger than one quarter because it covers more of the same bar.

Figure 4.2: two bars of the same length

Synthetic page for illustration, not Kota Buku material

2

From this page

PRACTICE DRAFT

Draw two bars of the same length. Shade $\frac{1}{2}$ on one and $\frac{1}{4}$ on the other. Which shaded part is larger?

DISCUSSION QUESTION

Two students shaded the same bar differently. How could they check who is right?

WORDS TO CHECK

denominator, numerator, common denominator

Delivered by Sifututor. Powered by Learnest Lab. Kota Buku is the intended proposal context, not an awarded contract. Proposed solution. Screens are concept illustrations; examples are synthetic; people in images are generated.

Staged delivery brings the complete experience into everyday use.

Launch brings preparation, class activities, answer checking, progress records, support suggestions, sharing and family summaries; a guided trial of full AI-drafted plans starts at the same time; expansion follows permission, validation and approval.

AT LAUNCH

● Launch, for all teachers

All teachers

Lesson and practice preparation	Classroom activities and attendance
Marked multiple-choice checking	Progress records and support suggestions
Class view, flags and rule-based suggestions	Resource sharing and notice templates
Parent and student summaries	Guidance, four languages, accessibility

● Guided trial, at the same launch

Selected teachers

- Full AI-drafted lesson plans for selected teachers, before wider release
- Plain-language analysis and the teacher’s assistant

LATER, WHEN CONDITIONS ARE MET

● Expansion, when conditions are met

Subject to permission, validation or approval

- Practice from Kota Buku content, with permission
- Handwriting checking, after validation
- Connections to official systems, after approval and access
- Deeper class-level analysis

No dates are promised here; sequencing only

Our recommendation connects teacher support, student learning and family understanding.

Sifututor proposes a Kota Buku app, powered by Learnest Lab, bringing preparation, class activities, practice and progress sharing into one understandable experience, built on our experience operating education platforms.

Our recommendation: build this app for Kota Buku

- ✓ Lesson plan and practice, drafted and approved
- ✓ Checked answers and a practice record
- ✓ An assistant for admin and analysis, teacher-approved
- ✓ Next support chosen by the teacher
- ✓ A clear summary for the family

Delivered by Sifututor

Powered by Learnest Lab

Context notes for each slide (1/3)

More attention to teaching, with students and parents included.	We propose a Kota Buku app that helps teachers prepare lessons, lead activities, check practice work and plan further support. Students receive practice suited to their needs. Parents receive an understandable picture of progress. Designed to support teaching from Standard 1 to Form 5. The supplied iPad is for the teacher; parents and age-appropriate student users access the service on their own devices.
What the teacher prepares can support the whole lesson.	The teacher chooses a topic, prepares practice material and uses it in class. Once answers are checked, the practice record helps the teacher choose further support and prepare a summary for families. The aim is to reduce repeated preparation and organisation. Teachers still review materials and make teaching decisions. Initially, updates to official school systems remain separate.
Teachers can start with a lesson goal, not a blank page.	The teacher selects a topic and what students should learn. The app provides a daily lesson-plan template, known as RPH, and helps draft practice material using artificial intelligence (AI). The teacher checks, edits and chooses what to use. The lesson-plan template and AI-assisted practice preparation are planned for all teachers at launch. Full AI-drafted lesson plans enter a guided trial with selected teachers at the same launch.
Students can work towards the same learning goal with different support.	For fractions practice, one student may need pictures and simpler steps. Another may be ready for a more challenging question. The teacher can use AI assistance to prepare material options, then decide which are suitable. Different student needs become part of lesson preparation, without requiring every resource to start from scratch.
Students can take part without receiving a new device.	The teacher uses the iPad to prepare and lead activities. Students can discuss questions and complete paper exercises. Where a classroom display is available, the teacher can also show questions for shared discussion. For multiple-choice practice, students mark answers on prepared sheets. The teacher photographs each sheet, checks that it belongs to the right student and corrects any reading errors.

Context notes for each slide (2/3)

The teacher can see the whole class and ask what to do next.	The app checks marked multiple-choice answers against an answer key. Once the teacher confirms the reading, the practice result is saved with the topic it assessed. The app keeps a running picture of each student's strengths and weaknesses from checked practice and rolls it up for the whole class: which topics are secure and which need another look. Simple rules flag patterns, for example a student who has missed the same topic in the last three checks, or most of the class missing one topic. The assistant explains those flags in plain language and suggests what to try next: reteach the whole class, work with a small group, or send related practice. Every suggestion traces back to the answers behind it. The teacher always acts; the assistant never changes anything for a student on its own. The class view, flags and rule-based suggestions are planned for all teachers at launch; the plain-language analysis and the assistant conversation start as a guided trial with selected teachers at the same launch.
The same assistant drafts the routine admin work from the data already collected.	Routine paperwork is where teachers lose the most time. The app already holds the attendance register, the practice records and the class calendar, so it can pre-draft the admin that follows from them: absence notices and reminders to parents from templates, a progress summary for the parent digest, and a short class summary for the school. Every draft is reviewed, edited and approved by the teacher; nothing is sent on its own. Notice and reminder templates and the parent digest are planned for all teachers at launch. Drafts written in plain language by the assistant start as a guided trial with selected teachers. Official school systems are updated separately at first; connections follow approval and access.
Every check and every lesson builds a record the teacher can use.	The records are the by-product of ordinary use: the attendance register, every checked practice with the topic it assessed, the plans and materials the teacher used, the notices and summaries sent, and the teacher’s own decisions. They stay under the school and ministry as controller, with the platform as processor, processed and stored in Malaysia by design, and are used only for the stated purposes. What comes back at launch: a progress record for every student by topic, a class report for the school, and the parent summary. Through the guided trial with selected teachers: targeted practice drafted by the assistant from a student’s own wrong answers, and plain-language reports. Later, and only with the school’s and the ministry’s approval, the same records could stand in for the printed report card. Nothing here replaces the teacher’s judgement; every output is reviewed before it is used.

Context notes for each slide (3/3)

Parents can understand their child's progress through a clear summary.	On their own phone or device, parents can view teacher-curated progress summaries, attendance information and announcements. For example, a teacher may share that a child understands one part of a topic but needs more practice with another. Information is shared through periodic summaries, not a live feed of every activity. Parents see only their own child's information. Older students can be given limited access to their own progress summaries. They can read feedback shared by the teacher and understand which parts of their learning need attention. For younger students, sharing is primarily through parents. Access follows age-appropriate rules and school policy. Students do not need to own a device to join the classroom activities in this proposal.
Kota Buku content can support everyday teaching, beyond reading alone.	In the proposed expansion, a teacher selects a relevant page or chapter, then gets help preparing practice material and discussion questions from it. Kota Buku content becomes part of lesson preparation and classroom activity. This expansion depends on permission to use and access the content. Initial lesson preparation starts with public curriculum documents verified for use.
The app must be practical in real school conditions.	The app must be practical in real school conditions. Downloaded materials, the attendance register and on-device answer checking are designed to keep working when the internet is limited; new material drafted through online artificial intelligence needs a connection. Step-by-step guidance helps teachers get started; help is available in Malay, English, Mandarin and Tamil; accessibility features are included. Teachers and their immediate school leader can see that teacher’s use records; higher levels receive only group summaries that do not identify individual teachers. Use records are for support, not appraisal or punishment. Identifiable student information is intended to be processed and stored in Malaysia, with access limited by authorised role and purpose; this is a design requirement of the proposal, not a completed certification.
Staged delivery brings the complete experience into everyday use.	Launch: lesson and practice preparation, classroom activities, marked multiple-choice answer checking, student progress records, support suggestions, teacher resource sharing and age-appropriate parent and student summaries. Teachers can reuse shared materials and prepare notices or reminders from templates for review before sending. Guidance, language support and accessibility are included. Guided trial at launch: full AI-drafted lesson plans for selected teachers before wider release. Expansion: practice from Kota Buku content with permission; handwriting checking after validation; connections to official systems after approval and access; deeper class-level analysis.
Our recommendation connects teacher support, student learning and family understanding.	Sifututor proposes a Kota Buku app, powered by Learnest Lab, that brings lesson preparation, classroom activities, practice and progress sharing into one understandable experience. We bring experience developing and operating education platforms to create this new solution. Our direction is clear: better-supported teachers, suitable support for students and a clearer understanding of progress for parents.
