

TEKUN Corporation

Integrated Collection Growth Partnership

A TEKUN Corporation-owned platform, authorised managed operations and an evidence-led path to scale

Confidential, controlled stakeholder use

1 September 2026

The proposed decision

Authorise a governed discovery and pilot co-design programme, then commit to implementation only after authority, evidence, customer-treatment and commercial gates are satisfied.

This is not a request to approve a price, launch date or promised recovery result today.

Why this opportunity matters now

The environment is changing

- Malaysia's consumer-credit framework now places greater emphasis on authorisation, conduct, evidence and complaints handling.
- Customer treatment, identity verification, contact discipline and payment evidence must be designed into daily work.
- Different portfolios may follow different legal and operating pathways.

The operating opportunity

- Connect portfolio, customer, interaction, payment and outcome information.
- Make authorised action easier to perform consistently and easier to prove.
- Create a reusable foundation for additional principals and portfolios.

Important: Actual regulatory applicability must be confirmed portfolio by portfolio.

TEKUN Corporation starts from experience, not from zero

2014: TEKUN Corporation states it was registered with SSM.

2015: It states that its debt-collection customer call centre was established.

Established operations: It publicly describes collection and recovery as a core service.

2026 appointments: Public announcements show continuing collection or recovery activity.

The opportunity is to modernise and connect an existing capability, not to replace TEKUN Corporation's identity or relationships.

From operating capability to financial contribution

- 1. **Cleaner portfolio intake** reduces ambiguity and manual rework.
- 2. **Guided authorised work** improves consistency and capacity.
- 3. **Verified payment evidence** makes outcomes trustworthy.
- 4. **Reconciled reporting** strengthens management and principal confidence.
- 5. **Repeatable onboarding** supports more principals without proportional reinvention.

Technology enables the pathway. Portfolio quality, policy, staffing, authority and economic conditions still shape results.

One partnership, three coordinated responsibilities

TEKUN Corporation governs

- Client and principal relationships
- Policy, risk appetite and authority limits
- Portfolio acceptance and consequential decisions
- Final oversight of customer treatment and value

Our team delivers

- Platform design, build, operation and maintenance
- Authorised collection execution or coordination
- Integrations, monitoring, support and improvement
- Evidence, reporting and transition support

Jointly governed

- Discovery and pilot design
- Baseline, scorecard and service levels
- Incidents, changes, learning and roadmap

TEKUN Corporation would own the platform and direction

- TEKUN Corporation remains the client, governor and owner of policy.
- The operating partner may recommend but cannot silently assume settlement, write-off or legal authority.
- Expansion occurs only after evidence gates are met.
- Consequential authority is explicit, limited and auditable.
- Data, configuration and operating records remain usable and exportable.

The relationship should be durable because it keeps producing measurable value, not because TEKUN Corporation cannot leave.

A complete collection operating loop

Intake and validate → Segment → Assign → Notify → Verify → Engage → Outcome branch: promise, protect, payment route or approved escalation → Reconcile → Cease/close → Improve

Every stage has:

- a named owner;
- required information;
- an allowed next action;
- customer-treatment and authority controls;
- an auditable event and outcome.

Protected branches handle disputes, hardship, vulnerability, complaints and legal holds without losing the core record.

One coherent platform, several specialised layers

1. **Experience:** agent, supervisor, management, compliance and principal views.
2. **Authoritative portfolio:** principal, portfolio, customer/account, case and policy records.
3. **Controlled interaction:** queues, notices, contact, promises, complaints and holds.
4. **Evidence and money:** payment evidence, reconciliation, cessation and outcome history.
5. **Enterprise intelligence:** service health, performance, risk and roadmap insight.

Each principal sees only its authorised portfolio; TEKUN Corporation retains the governed enterprise view.

1 Experience and authorised views

2 Portfolio, customer, case and policy records

3 Controlled interaction and workflow

4 Payment evidence and reconciliation

5 Performance, risk and service intelligence

Trust, identity, access and audit support every layer

The solution combines platform and people

Managed operating capability

- ✓ Authorised representatives perform approved work.
- ✓ Finance validates payment evidence and reconciliation.
- ✓ Platform operations protect availability, change and recovery.
- ✓ Supervisors manage queues, quality, exceptions and capacity.
- ✓ Compliance and privacy teams maintain independent oversight.
- ✓ Product and improvement teams convert evidence into better workflows.

Headcount, channel mix, location and service hours remain discovery and costing decisions.

Customer treatment is part of the operating system

✓ Verify identity before discussing an account.

✓ Enforce approved contact windows, frequency and channel rules.

✓ Use controlled notices, scripts and evidence.

✓ Stop or redirect activity for settlement, dispute, hardship, vulnerability or legal hold.

✓ Keep complaints accessible and traceable.

✓ Representatives never receive customer money.

✓ Preserve human authority for consequential outcomes.

Final controls must follow confirmed portfolio applicability and TEKUN-approved policy.

Value is measured as a causal chain, not a promise

Capability	Operating signal	Business contribution
Better portfolio data	Fewer intake exceptions	Faster onboarding
Guided work	Clearer queues and next actions	More effective capacity
Payment integration	Reconciled evidence	Cleaner revenue and fee basis
Customer-treatment controls	Fewer avoidable exceptions	Stronger trust and readiness
Principal reporting	Timely accepted reports	Retention and referral potential
Platform health	Fewer interrupted workflows	Revenue protection and confidence

Every result is assessed against an agreed baseline and customer-treatment guardrails.

Why our platform experience is relevant

Our existing operating foundation demonstrates patterns needed for this partnership:

- ✓ connected identities, workflows, finance and reporting;
- ✓ multi-participant service operations with live users;
- ✓ controlled staff workspaces and governed decisions;
- ✓ communications, analytics, monitoring and recovery disciplines;
- ✓ audit trails, release controls and human accountability;
- ✓ responsible AI direction with human authority.

This proves platform-operating capability, not prior debt-collection performance. Collection-specific strategy and controls must be created and tested with TEKUN Corporation.

Prove value safely through a bounded pilot

A fair pilot needs

- one principal or one defined cohort;
- a written baseline and comparable history;
- agreed outcomes and customer-treatment guardrails;
- fixed measurement definitions and exclusions;
- weekly operating review and monthly governance review;
- explicit expand, adjust, re-baseline or stop decisions.

The pilot succeeds only when performance, conduct, reconciliation and platform-health evidence are all acceptable.

Two operating histories create a credible starting point

Period	TEKUN Corporation evidence	Our platform-operating evidence
2014–2015	Corporate registration and collection call-centre history	Not applicable
2018–2024	Collection service continues	Live service, participant and finance operations mature
May 2025	Not applicable	New SIMS goes live in production
2025–2026	Not applicable	Specialist staff tools, operations, analytics and monitoring mature
2026	New public collection/recovery appointments	Connected operating foundation continues to mature
Proposed next	Evaluate integrated platform and managed service partnership	Apply proven platform disciplines to a dedicated collection domain

Roadmap: expand only when evidence is strong enough

Long-term value deepens without artificial lock-in

- 1. **Foundation value:** platform, baseline and controls.
- 2. **Operating value:** trained teams, reliable service and integrations.
- 3. **Growth value:** faster onboarding, more principals and accepted reporting.
- 4. **Compounding value:** portfolio knowledge, trusted governance and a joint roadmap.

TEKUN Corporation should retain complete export, configuration, operating records and transition support from day one.

Recommended next step

Authorise discovery and pilot co-design

The joint working group should produce:

1. a current-state lifecycle and stakeholder map;
2. portfolio and principal segmentation;
3. authority, regulatory and privacy responsibility maps;
4. system, provider, data and money-flow architecture;
5. baseline, KPI and guardrail definitions;
6. a bounded pilot cohort and evidence gate;
7. solution scope, transition approach and implementation sequence;
8. commercial inputs without premature pricing.

Commit to full implementation only after the evidence, authority and commercial gates are satisfied.
