

TEKUN Corporation Integrated Collection Growth Partnership

Platform, managed operations, governance and measurable growth capability

Document control	Detail
Status	Governed sourcebook — locally reviewed edition
Prospective client	TEKUN Corporation Sdn Bhd
Document owner	Hafiz / designated proposal owner
Version	1.0
Last reviewed	31 August 2026
Classification	Confidential — internal and controlled stakeholder use
Legal position	This document is not legal advice; applicability and authorisation require confirmation
Commercial position	No price, guaranteed result or final commercial commitment is made

How to use this sourcebook

This is the knowledge source behind future discussions and presentations. It is deliberately more complete than a slide deck. Presentation creators may select and arrange material for their audience, but they should preserve the claim labels, limitations and ownership boundaries.

Every substantial section follows three layers:

1. **In one minute** explains the business meaning.
2. **How it works** explains people, process and system relationships.
3. **Control and evidence** gives technical, regulatory or measurement depth.

Claim convention

Label	Meaning
Established	Supported by TEKUN Corporation public evidence or existing Sifututor operating evidence
Publicly stated	Attributed to the organisation that published it; may require freshness checking
Proposed design	What the partnership would create; not a current TEKUN Corporation capability claim
Conditional	Depends on discovery, portfolio facts, legal interpretation or approval
Strategic direction	Future capability governed by an evidence gate, not a launch promise

Label	Meaning
Illustrative	An example used to explain a possible model; not a representation of current operations

Suggested reading paths

Reader	Recommended path
Executive or board	Executive orientation; Chapters 1–4, 19–25 and 28
Collection operations	Chapters 4–7, 9–12, 15–17 and 20–24
Compliance, legal or privacy	Chapters 2, 5, 7, 11–14, 16, 20–21 and 26–27; Appendices C/F/G
Finance and performance	Chapters 3, 6, 12, 19–22 and 24; Appendix D
Technology, data or security	Chapters 8–14, 17–18 and 24; Appendices B/C
Procurement or partnership	Chapters 4–5, 7 and 21–28

Executive orientation

The proposition in one sentence

Modernise, integrate, scale and continuously improve TEKUN Corporation's established credit-management and recovery business through a **TEKUN Corporation-owned and governed platform**, built and operated by our team together with an authorised managed collection service.

What the evidence says

TEKUN Corporation is not beginning from zero. It states that it established its Customer Call Centre for debt collection on 15 September 2015, that it is registered with the Ministry of Finance under field code 221105, and that around 30 agencies and companies have appointed it. TCorp's own figure is undated and may already include the appointments below. Public announcements show Awqaf Education and MOCCIS collection or recovery appointments during 2026. [\[CLM-003-006\]](#) [\[CLM-013-016\]](#)

The opportunity is therefore not to “fix a broken collector.” It is to give an established operator a stronger digital operating spine: one that can coordinate multiple principals, make customer treatment provable,

connect payment evidence to case outcomes, give management reliable portfolio intelligence and support safe expansion.

What the partnership combines

Ownership and accountability

TEKUN Corporation governs	Our team delivers	Jointly governed
Client and principal relationships	Platform design, build, operation and maintenance	Discovery, implementation priorities and service levels
Policy, risk appetite and authority limits	Authorised collection execution or coordination	Baseline, scorecard and pilot evaluation
Regulatory relationship and legal position	Reporting, operational evidence and continuous improvement	Governance forums and roadmap
Portfolio onboarding approval	Technical and operating documentation	Incident, conduct and change escalation
Final consequential authority as agreed with principals	Recommendations within approved limits	Expansion after evidence gates

The exact legal responsibilities, data roles and authority chain must be confirmed with TEKUN Corporation's compliance function and qualified Malaysian counsel. The platform can enforce and evidence controls; it cannot itself declare legal compliance.

The value pathway

This is a measurable pathway, not a profit guarantee. Improvement must be proven against agreed definitions and a defensible baseline.

Part I — TEKUN Corporation

Context And Opportunity

Chapter 1 — An established collection operator

In one minute

TEKUN Corporation is a TEKUN Nasional subsidiary with a public business focus that includes credit management and recovery. Its collection call centre dates to 2015, and its website states that approximately 30 organisations have appointed it. The respectful starting point is capability expansion, not replacement. [CLM-001-006] [CLM-008]

Publicly evidenced milestones

Date	Public milestone	What it demonstrates	Limitation
27 February 2014	TEKUN Corporation states it was registered with SSM	Corporate operating history	First-party statement; reverify before external use
15 September 2015	Customer Call Centre established for debt collection	More than a decade of stated collection operation	Current process, technology and scale are not public
Undated current page	TCorp states MOF field code 221105 and around 30 appointing organisations	Established collection role and multi-principal context	Currency and exact active count require confirmation
7 May 2026	Collection and recovery agreement announced with Awqaf Education	Recent portfolio/client expansion activity	No value, duration or portfolio detail published
July–August 2026	MOCCIS appointment, service agreement and MoU events announced	High-profile expansion activity	No value, commission, account count or performance disclosed

[CLM-001] [CLM-004-006] [CLM-013-016]

What is not publicly disclosed

No public source reviewed identified a third-party provider appointed by TEKUN Corporation, a contract value, a commission structure, its current collection platform, portfolio volumes or a current performance baseline. This does **not** prove that any of these do not exist. They are discovery matters. [CLM-017-018]

Chapter 2 — Why the operating environment is changing

In one minute

Malaysia's Consumer Credit Act 2025 and the Consumer Credit Commission create a more formal authorisation and conduct environment for applicable debt collection. The published standards are unusually operational: they address when contact may occur, how often, what notice must precede recovery, identity checks, disclosure, payment handling, complaints, hardship, representative competency and information security. These rules can be translated into platform controls and evidence. [CLM-026-039] [CLM-042-044] [CLM-046-067]

Regulatory timeline as at 31 August 2026

Milestone	Date	Practical meaning
Consumer Credit Act 2025 gazetted	31 December 2025	New statutory framework established
Act effective except Part V	1 March 2026	General framework commenced
Part V and applications opened	1 June 2026	Licensing and registration provisions commenced
SKP standards issued	5 June 2026	Authorisation and conduct expectations became operational references
Existing affected operator transition	Application required within six months from 1 June 2026 under section 135(1)	Exact applicability, status and consequences require TCorp/counsel confirmation

[CLM-026-029] [CLM-109]

Scope must be determined portfolio by portfolio

Debt collection is listed as a credit service business, but the Act contains exclusions and different treatment for certain government-funded micro-financing and co-operative contexts. TEKUN Corporation serves multiple principals, so one legal conclusion should not be applied across every portfolio without analysis. [CLM-030-039] [CLM-040] [CLM-041]

Phase 2 is expected to transfer hire purchase and credit sales from KPDN to SKP. TEKUN Corporation's public client panel includes motor dealers; this becomes relevant only if their assigned portfolios involve those products. The products are not publicly disclosed, and no Phase 2 date was found. [CLM-110-111]

The platform consequence

The immediate business opportunity is not a fear-based compliance sale. It is the ability to make authorised operations easier to perform consistently and easier to prove:

- actions are allowed only inside approved time and frequency rules;
- the correct notice and identity steps precede debt discussion or recovery action;
- hardship, dispute and settlement events stop or redirect work automatically;
- every action, override, approval and communication attempt is traceable;
- management and compliance see exceptions without waiting for a complaint;
- each principal receives segregated and trustworthy reporting.

Chapter 3 — The strategic opportunity

In one minute

TEKUN Corporation publicly describes itself as a principal income-generating subsidiary for TEKUN Nasional. A stronger collection operating platform can support that mandate through capacity, performance evidence, client confidence and the ability to onboard more appointing organisations safely.

[CLM-008]

From capability to financial contribution

Capability	Operating effect	Possible business effect	Measure before claiming value
Reliable portfolio intake	Less manual cleansing and re-entry	Faster start for new assignments	Onboarding lead time, rejection rate
Better contact context	Agents act with clearer information	Higher right-party contact opportunity	Right-party contact rate, data completeness
Promises linked to payment evidence	Follow-up is timely and outcomes verified	Better kept-promise visibility	Kept-promise rate, time to payment
Reconciliation integration	Payments stop collection faster and close cases accurately	Lower exception effort and customer friction	Reconciliation ageing, cessation compliance
Conduct controls	Fewer avoidable exceptions	Protects client trust and regulatory readiness	Contact, notice, disclosure and complaint exceptions
Principal reporting	Each appointing organisation sees its own outcomes	Retention and stronger service credibility	Report acceptance, renewal and principal satisfaction
Reusable onboarding	Policies and integrations become repeatable	More principals without proportional reinvention	Principal onboarding lead time, capacity headroom

Technology is an enabler. Portfolio quality, customer contactability, policy, staffing, authority, economic conditions and principal cooperation also affect collection results.

Part II — Partnership And Operating Model

Chapter 4 — Partnership proposition

In one minute

The proposed model combines ownership and accountability on the TEKUN Corporation side with specialised technology and operating execution from our team. TEKUN Corporation should own the platform and govern the operation; our team should earn a long-term role through results, expertise, integration and continuous improvement.

Proposed model

What is included in principle

- Dedicated collection platform owned and governed by TEKUN Corporation.
- Platform design, implementation, operation, maintenance and continuous improvement by our team.
- Authorised collection work performed or coordinated within confirmed legal and policy boundaries.
- Integration with approved principal, communication and payment-evidence sources.
- Operating procedures, training, supervision, quality and service governance.
- Evidence-led pilot followed by gated expansion.
- Complete documentation, data portability and transition support from day one.

What is not yet committed

- A particular portfolio, principal, channel mix, headcount, launch date or price.
- Replacement of any existing system or provider.
- Separate registration or operation under TEKUN Corporation authorisation.
- Any recovery uplift, collection target or profit outcome.
- Any legal, regulatory or data-role conclusion.

Chapter 5 — Stakeholders and responsibilities

In one minute

Collection is a multi-stakeholder operation. The platform succeeds only when it preserves the difference between who owns the underlying financing, who governs collection, who performs work, who receives money, who verifies payment and who makes consequential decisions.

Proposed responsibility model

The model is shown in two linked views so every role remains readable. The first view covers governance and delivery; the second isolates money handling and compliance assurance.

Governance and delivery

Activity	TEKUN Corporation	Portfolio owner	Partner platform team	Collection operation
Approve portfolio onboarding	Accountable	Consulted/Responsible	Supports	Consulted
Define collection policy	Accountable	Consulted	Configures	Responsible for execution
Build and operate platform	Governs	Informed	Accountable/Responsible	Consulted
Assign and work cases	Governs	Informed	Enables	Responsible
Receive customer money	As confirmed	As confirmed	Never as agent	Never as agent
Reconcile payments	Accountable as agreed	May confirm	Enables	Supports
Approve settlement/write-off/legal	Accountable as agreed	May retain authority	Never independently	Recommends/escalates only
Complaints and hardship	Accountable	Consulted	Enables evidence/holds	Responsible within policy
Regulatory submission	Accountable party to be confirmed	May supply data	Supports data/export	Supplies operating evidence
Roadmap and expansion	Chairs	Consulted	Co-designs/delivers	Supplies learning

Money handling and assurance

Activity	Finance/payment source	Compliance/legal
Approve portfolio onboarding	Consulted	Consulted
Define collection policy	Consulted	Reviews
Build and operate platform	Supports integrations	Reviews controls
Assign and work cases	—	Monitors
Receive customer money	Responsible through approved channel	Reviews rule
Reconcile payments	Responsible as agreed	Audits evidence
Approve settlement/write-off/legal	Consulted	Reviews
Complaints and hardship	Consulted	Responsible oversight
Regulatory submission	Supplies finance evidence	Reviews/submits as assigned
Roadmap and expansion	Supplies outcome data	Holds control gate

This matrix is proposed. The final RACI must reflect the underlying principal contracts, TEKUN Corporation authority and qualified legal advice.

Chapter 6 — End-to-end collection lifecycle

In one minute

The solution is a complete operating loop, not a dialler or dashboard. A portfolio enters with defined authority and data; accounts are validated and segmented; authorised representatives work controlled cases; promises and payment evidence close the loop; complaints, disputes and hardship take protected paths; management learns from results.

Lifecycle control matrix

Stage	Key information	Required control	Operational value
Intake	Principal, account, agreement, balance, history	Provenance, validation, deduplication, segregation	Trustworthy starting population
Segment	Product, arrears age, value, geography, status	Approved strategy and exclusions	Proportionate treatment
Assign	Agent, team, workload, skill, language	Role, competency and authorisation validity	Accountable ownership
Notify	Reminder/recovery notice and delivery	Correct template, fields, timing and evidence	Defensible pre-contact/recovery step
Verify	Customer identity	Verification before debt disclosure	Confidentiality and correct-party contact
Engage	Attempts, conversations and outcomes	Contact window, frequency cap, script and conduct	Consistency and fair treatment
Promise	Amount, date, method and tolerance	Follow-up and no false closure	Reliable outcome tracking
Protect	Dispute, hardship, vulnerability or legal hold	Automatic pause and specialist routing	Prevents harmful or invalid escalation
Pay	Approved payment route	Representatives do not receive funds	Safer money flow
Reconcile	Bank/principal evidence and allocation	Source evidence retained; exceptions visible	Verified collection result
Cease/close	Settlement, accepted plan, withdrawal or return	Immediate stop trigger and audit trail	Prevents continued contact after resolution
Report/improve	Outcomes, exceptions, cost and service health	Segregated views and governed definitions	Better decisions and principal trust

Chapter 7 — Governance and decision authority

In one minute

Performance and customer-treatment oversight must reinforce one another without becoming the same conversation. A collection target cannot excuse a conduct failure. The proposed governance separates strategic, performance, compliance and delivery forums while keeping escalation visible to TEKUN Corporation.

Decision principles

1. TEKUN Corporation chairs strategic governance and owns policy.
2. Consequential authority is explicit, limited and auditable.
3. The partner may recommend but never silently assume settlement, write-off or legal authority.
4. Compliance exceptions remain visible even when collection outcomes improve.
5. Changes affecting conduct, money flow, data roles or principal contracts receive appropriate review.
6. Every expansion horizon requires evidence, not only a calendar date.

Part III — Dedicated Platform Solution

Chapter 8 — Platform architecture in plain language

In one minute

People should experience one coherent operation even though different components perform different jobs. Customer and staff channels sit at the top; authoritative portfolio, case and payment state sits beneath them; analytics, security, monitoring and recovery support every layer.

Authority principles

- One authoritative source is named for each balance, payment, case state and decision.
- A principal sees only its own portfolio and approved aggregate service information.
- Channels use managed interfaces; they do not directly alter core records.
- Imported evidence is retained with provenance instead of silently overwritten.
- Write-capable integrations use validation, duplicate protection, audit and failure handling.
- Analytics uses curated, policy-controlled data rather than unrestricted operational access.
- TEKUN Corporation can export its information, configuration and operating records in usable formats.

Chapter 9 — Portfolio and principal foundation

In one minute

TEKUN Corporation's multi-principal model requires more than an "organisation" field. Each principal can have distinct products, definitions, authority, strategies, channels, notices, service levels, reporting and integrations. The platform must keep these separate while giving TCorp a governed enterprise view.

Proposed information hierarchy

Core records

Record	Minimum purpose
Principal	Contract, data owner/controller context, policy and reporting boundary
Portfolio	Product, assignment scope, cohort, arrears definition and service rules
Customer/account	Identity, contact, agreement, balance components, schedule and restrictions
Case	Assignment, current treatment state, agent ownership, next action and escalation
Interaction	Channel, time, recipient verification, outcome, evidence and agent
Notice	Template/version, mandatory fields, delivery method, date and proof
Promise	Amount, due date, method, tolerance, status and linked payment
Payment evidence	Source, reference, amount, date, matching and reversal status
Complaint/dispute/hardship	Intake, owner, hold, evidence, decision and turnaround
Approval	Requested decision, limit, approver, rationale and timestamp
Representative	Employer, authorisation, competency, training, validity and revocation

Intake quality gates

Before an account enters active work, the platform should verify required identity/contact fields, balance composition, assignment authority, product and principal policy, previous notices/actions, dispute/hardship/legal state and the source snapshot. Invalid or ambiguous records remain exceptions rather than being pushed into agent queues.

Chapter 10 — Agent and supervisor workspace

In one minute

The workspace should tell an authorised representative what can be done now, why, and what must happen next. It should reduce memory-based compliance and manual searching while keeping human judgment and supervisor accountability visible.

Agent view

Area	What the agent needs
My work	Prioritised, authorised cases with due actions and safe workload limits
Customer context	Correct identity/contact data, language, account and principal context
Allowed action	Channel, contact window/frequency status, notice status and holds
Guided conversation	Approved script, identity check, mandatory explanations and outcomes
Outcome capture	Right-party contact, promise, dispute, hardship, complaint, no-contact or escalation
Payment direction	Approved official channel; no representative receipt of customer money
Next step	System-calculated follow-up with manual override only where authorised and recorded

Supervisor view

- queue volume, ageing and workload distribution;
- promises due, broken promises and unresolved outcomes;
- cases approaching service or conduct thresholds;
- quality samples, coaching actions and representative competency;
- overrides, exceptions and unusual activity;
- team contact, resolution and customer-treatment measures;
- ability to pause, reassign or escalate within authority.

Human control

Automation may surface priority and enforce hard rules, but it must not quietly decide settlement, hardship, legal escalation or other consequential outcomes. Where assisted prioritisation is later introduced, inputs, explanation, override, bias/quality monitoring and the applicable automated-decision guidance must be reviewed first.

Chapter 11 — Customer treatment and regulatory controls

In one minute

The strongest platform argument is not that rules exist; it is that authorised teams can follow them consistently and produce evidence. The controls below apply only where the confirmed legal pathway says they apply, but they form a prudent design baseline for fair collection.

Rule-to-control translation

Published expectation	Proposed platform control	Evidence produced
Contact during permitted hours	Channel/time-zone scheduler and hard block outside approved window	Attempt timestamp, channel, block/override log
Contact-frequency limit	Rolling consumer-level counter across channels	Weekly/monthly count and exception report
Written recovery notice before action	Approved template, mandatory fields and pre-action waiting gate	Notice version, delivery evidence and elapsed time
Verify identity before debt discussion	Scripted verification checkpoint	Method, result and agent timestamp without excessive exposure
No unauthorised third-party disclosure	Relationship/consent gate and script restriction	Consent or prevented disclosure record
Representatives do not accept payment	No cash-receipt function; official payment-route message only	Payment instruction and external evidence source
Stop on settlement or accepted arrangement	Authoritative payment/decision event places immediate cessation	Stop timestamp and any post-stop exception
Hardship assessment protects legal process	Hardship intake creates a system hold	Hold owner, start, status and release decision
Complaints are accessible and tracked	One complaints record with ownership and turnaround	Intake, investigation, outcome and remediation trail
Representatives remain competent	Appointment, training and periodic assessment records	Current validity and overdue assessment report

Published expectation	Proposed platform control	Evidence produced
Consumer data access is controlled	Role limits, audit, download controls and anomaly alerts	Access history, alert and investigation record

[CLM-047-067] [CLM-113]

Protective branches

Disputes, hardship, vulnerability, deceased/bankrupt status, complaints and legal matters should leave the standard collection queue. Each receives a specialised owner, a documented hold where required, controlled communication and a clear return/closure decision. This prevents target pressure from overriding customer treatment.

Chapter 12 — Payment, reconciliation and financial authority

In one minute

Collection results are real only when payment evidence is reconciled to the correct account. Representatives should direct customers to approved channels, not receive money. The platform connects the promise and interaction history to authoritative payment evidence, then stops or changes treatment accordingly. [CLM-022-023]

Illustrative flow requiring confirmation

The actual recipient account, receipt issuer, reconciliation owner and timing are not publicly known. This visual must remain illustrative until TEKUN Corporation validates it. [CLM-024]

Financial controls

- separate promise, reported payment and reconciled payment states;
- retain source evidence and reversals;
- prevent duplicate imports and allocations;
- keep unmatched or ambiguous funds visible as exceptions;
- require approval for adjustments, settlement recommendations and fee calculations;
- stop contact from an authoritative settlement/arrangement event;
- calculate performance and commercial fees only from agreed reconciled evidence;
- preserve point-in-time portfolio and ageing snapshots.

Chapter 13 — Data, integrations, security and resilience

In one minute

The platform will handle sensitive identity, financial and communication information. Trust depends on knowing why data exists, who may access it, where it came from, what changed, how an incident is handled and how service can recover.

Integration catalogue

Relationship	Purpose	Authority and safety rule
Principal → platform	Account assignment, balances, updates and withdrawals	Validate schema, provenance and duplicates; principal remains authoritative where agreed
Platform → principal	Status, activity and performance reporting	Principal-only segregation and approved definitions
Messaging/telephony ↔ platform	Controlled contact and interaction evidence	Channel consent/policy, identity, time/frequency and retention controls

Relationship	Purpose	Authority and safety rule
Payment source → platform	Transaction evidence	Signed/validated feed, duplicate/reversal handling, no agent-reported result
Platform → official documents	Notices, statements or acknowledgements	Approved template/version and delivery evidence
Platform → regulatory/credit reporting	Required data support where applicable	Accountable submitter, format and approval confirmed before build
Platform → analytics	Curated operational and compliance insight	Read-oriented, policy-controlled and audited access

Privacy roles are a discovery outcome

The amended Personal Data Protection framework gives duties according to whether a party is a controller, processor, sub-processor or joint controller and according to applicable criteria. The proposed relationship could create direct duties for the partner, but the actual role cannot be declared from public information. Data flows, agreements, DPO requirements, security duties, breach response, retention and cross-border constraints must be confirmed. [\[CLM-070-075\]](#) [\[CLM-076\]](#)

Trust model

Control family	Proposed design	Evidence
Identity and access	Strong authentication, least privilege, principal and role boundaries	Access review and authentication logs
Data authority	Named source, explicit write path and immutable provenance	Interface catalogue and change history
Sensitive-data protection	Encryption, minimisation, controlled export/download and endpoint policy	Configuration and access evidence
Audit	Append-only or tamper-evident event history for material actions	Searchable export for audit/investigation
Monitoring	Availability, errors, failed feeds, unusual access and operational thresholds	Alerts, incident records and service reports
Incident response	Severity, ownership, containment, notification support and learning	Incident and breach registers
Backup and recovery	Protected backups, defined objectives and periodic restore tests	Backup health and restore evidence
Secure change	Review, testing, journey evidence, controlled release and rollback	Change and release records

Chapter 14 — Reporting, analytics and explainable assistance

In one minute

Different stakeholders need different truth. An agent needs today's safe actions; a supervisor needs queue and quality health; compliance needs exceptions; management needs outcomes and cost; each principal needs only its own portfolio; the board needs strategic value and risk.

Intelligence progression

1. **Descriptive:** what was assigned, attempted, promised, paid, reconciled and closed.
2. **Diagnostic:** why contact, promise, payment, complaint or exception patterns differ.
3. **Guided:** surface approved next actions, missing information and risk flags.
4. **Predictive:** forecast expected outcomes or capacity only after sufficient clean history.
5. **Assisted:** explainable summaries and quality sampling, only after definitions, clean data, audit and human oversight are established; humans retain authority.

Part IV — Managed Collection Service

Chapter 15 — Operating team and service model

In one minute

The proposed solution combines platform and people. The operating team executes authorised work; supervisors protect quality and capacity; compliance has an independent line; finance verifies outcomes; product and engineering improve the system without bypassing business authority.

Proposed operating cells

Role	Primary responsibility	Key boundary
TCorp service owner	Client/principal relationship, policy, authority and outcomes	Retains governance
Collection manager	Strategy, portfolio allocation, performance and escalation	Cannot override compliance controls silently
Supervisor	Queue health, coaching, quality, exceptions and daily decisions	Works within approved limits
Authorised representative	Contact, verify, understand, record, follow up and escalate	Does not receive money or make unapproved consequential decisions
Complaints/hardship specialist	Protected-case assessment and resolution coordination	Independent from target pressure where required
Finance/reconciliation	Validate payment evidence, allocation, reversals and reporting	Reconciled evidence is outcome authority
Compliance/privacy	Interpret obligations, monitor conduct/data and manage escalation	Separate reporting line from performance
Platform operations	Availability, integrations, incidents, changes and recovery	Does not redefine business policy
Product/continuous improvement	Analyse friction, prioritise improvements and verify value	Roadmap co-owned and evidence-gated

Headcount, employment model, location, channel mix and hours remain discovery and costing decisions.

Chapter 16 — Training, competency and quality assurance

In one minute

An authorised representative needs more than a script. The organisation must know who is suitable, what they were trained on, whether they can apply it, how quality is sampled and what happens when conduct or performance falls below the approved standard.

Competency lifecycle

Screen and verify → Train → Assess → Authorise → Observe and sample → Coach or remediate → Reassess periodically. A material concern may trigger immediate suspension, revocation or investigation.

Training domains

- TEKUN Corporation and principal policy;
- customer identification and confidential communication;
- permitted channels, timing, frequency and notices;
- accurate explanation of account and payment routes;
- promises, disputes, complaints, hardship and vulnerability;
- prohibited conduct, pressure and misleading statements;
- platform use, evidence quality and escalation;
- personal-data protection, device and workspace controls;
- fraud awareness and unusual activity;
- changes in law, policy, portfolio or system.

Quality measures should balance outcome, accuracy, conduct, documentation and customer treatment. Recovery alone is not a complete quality score.

Chapter 17 — Service management and continuous improvement

In one minute

A healthy platform is one that detects issues, responds, recovers and improves without losing accountability. The operating partnership should use the same evidence discipline for software, integrations and collection processes.

Service disciplines

- agreed service hours, availability and response objectives;
- health monitoring for application, integrations, data feeds and queues;
- incident severity, communication and post-incident learning;
- change classification, review, testing and rollback;
- restore exercises and continuity procedures;
- operating playbooks, data dictionary and configuration history;
- visible improvement backlog jointly prioritised with TCorp;
- principal and customer feedback converted into measurable changes.

Part V — Capability Proof, Measurement And Commercial Logic

Chapter 18 — Why our experience is relevant

In one minute

Sifututor has operated a live education service since 2018 and moved its new SIMS generation into production in May 2025. Its ecosystem coordinates multiple participant groups, operational states, financial evidence, mobile and staff channels, communications, analytics, permissions, monitoring and recovery. That is evidence of platform-operating capability—not evidence of debt-collection performance.

[CLM-HIS-001-002] [CLM-NAR-001]

Proven foundations

Existing Sifututor capability	Relevance to TEKUN Corporation	Truth boundary
SIMS authoritative operating core	Pattern for connected identities, workflows, finance and reports	Not a debt or arrears system today
Ripple specialised staff workspace	Pattern for queues, accounts, reconciliation, roles and governed decisions	Collection strategy and controls are new
Kelasapp tenant separation	Pattern for serving separate organisations and finance contexts	New platform isolation requires its own testing
Finch conversation ownership	Pattern for multi-channel, multi-brand agent work	Approved collection channels must be confirmed
Parent/Tutor authenticated apps	Pattern for safe participant self-service and notifications	Customer-in-arrears portal would be new
Owner analytics	Pattern for curated, read-only and policy-controlled insight	TEKUN datasets and KPI definitions are new
Monitoring, testing and recovery	Pattern for operating live services and controlled change	TEKUN service levels and recovery proof must be established
Agent OS	Pattern for playbooks, evidence, human oversight and continuous learning	Does not substitute for collection training or legal authority

What must be created specifically for collection

- principal and portfolio assignment model;
- debt, instalment, arrears and cohort records;
- configurable treatment strategies and work queues;
- conduct gates for notice, identity, timing, frequency and disclosure;
- promises to pay linked to reconciled evidence;
- complaints, disputes, hardship, cessation and legal holds;
- representative authorisation and competency lifecycle;
- per-principal reporting and regulatory submission support;
- collection operations, scripts, supervision and quality;
- TEKUN-specific integrations, policies, service levels and proof.

The credible capability claim

We have learned how to build and operate complex, multi-stakeholder and financially sensitive live platforms. We propose applying those proven foundations—together with TEKUN Corporation's collection expertise—to create a dedicated collection platform and managed service. The pilot, not our education history, will prove collection outcomes.

Chapter 19 — Business impact model

In one minute

The platform can influence financial contribution by increasing safe operating capacity, improving verified outcomes, reducing avoidable manual work, protecting client trust and enabling faster onboarding of additional principals. Every effect needs a named measure.

Impact chain

Input capability	Leading operational signal	Outcome signal	Strategic effect
Better portfolio data	Completeness, intake acceptance, time to first action	Contactability and case throughput	Faster principal onboarding
Guided work and segmentation	Workable queue coverage, right-party contact	Kept promises and time to payment	More effective capacity
Payment integration	Match rate and reconciliation age	Verified collection/recovery	Clearer revenue and fee basis
Customer-treatment controls	Conduct and complaint exceptions	Trust and service consistency	Principal retention and regulatory readiness
Supervisor and quality tools	Coaching closure and competency currency	Stable team performance	Scalable operations
Principal reporting	Report timeliness and acceptance	Renewal and referral opportunity	More appointing organisations
Platform health	Availability, failed-feed rate, restore evidence	Fewer interrupted workflows	Revenue protection and confidence

Economic caution

Recovery is affected by portfolio vintage, arrears age, balance, product, customer circumstances, data quality, contactability, moratoria, legal state and economic conditions. A fair comparison therefore uses frozen or controlled cohorts and agreed adjustment events. Raw totals alone can reward easy portfolio mix rather than better operation.

Chapter 20 — Baseline and scorecard

In one minute

“Collection rate” is not a complete definition. The parties must agree numerator, denominator, population, period, exclusions and authoritative source before a target or commercial fee can use it.

Balanced scorecard

Lens	Core indicators	Why it matters
Operations	Contact coverage, right-party contact, promises, kept promises, time to first action, cases per agent	Shows activity and workflow health

Lens	Core indicators	Why it matters
Financial outcomes	Amount collected, collection rate, recovery rate, net recovery, cost-to-collect	Shows verified financial effect
Portfolio quality	Ageing, PAR where appropriate, roll rate, cure rate, write-off context	Shows movement and risk, not only cash
Customer treatment	Complaints, resolution time, hardship outcomes, dispute age, cessation	Protects fairness and trust
Compliance controls	Contact, notice, identity, disclosure, payment-handling, representative and data exceptions	Proves whether the process stayed inside approved rules
Platform health	Availability, incidents, restore time, backup/restore evidence, failed feeds, reconciliation age	Shows service dependability
Strategic growth	Active principals, onboarding lead time, capacity headroom, renewal and contribution	Shows whether capability compounds

Core metric definitions

KPI	Governed definition starter
Right-party contact rate	Verified customer conversations ÷ valid contact attempts
Kept-promise rate	Promises due that were fulfilled within agreed amount/date tolerance ÷ promises due
Collection rate	Reconciled qualifying amount received ÷ agreed amount due for the defined population and period
Recovery rate	Reconciled amount recovered from a named frozen cohort ÷ opening value of that cohort
Cost-to-collect	Agreed attributable collection cost ÷ reconciled qualifying amount collected
Roll rate	Accounts moving from one ageing bucket to the next worse bucket ÷ accounts in the starting bucket
Cure rate	Delinquent accounts returning to current under the agreed definition ÷ starting delinquent accounts
Cessation compliance	Qualifying cases stopped within the agreed window ÷ all cases requiring cessation
Reconciliation ageing	Value and count of unmatched payment evidence by age bucket
Principal onboarding lead time	Days from approved mobilisation input to first authorised collection action

The full KPI dictionary must name source, owner, frequency, exclusions and misinterpretation risk. See Appendix D and the governed research framework.

Chapter 21 — Bounded pilot

In one minute

A pilot creates TEKUN-specific proof while limiting operational, client and implementation risk. It should cover one principal, product or arrears cohort large enough to measure but bounded enough to govern.

Pilot design

Element	Proposed rule
Scope	One principal or one defined cohort within one principal
Baseline	Prefer 6–12 months of comparable history using written definitions
Cohort	Freeze account list, value, arrears stage and starting conditions
Comparator	Matched hold-out or defensible historical comparison where feasible
Duration	Long enough to observe contact, promise and payment cycles; decide after discovery
Primary outcomes	Agreed collection/recovery and kept-promise measures
Guardrails	Conduct, complaint, hardship, cessation, reconciliation and platform-health measures
Governance	Weekly operating review; monthly performance and compliance reviews
Decision	Expand, adjust, re-baseline or stop based on evidence

A pilot that improves recovery while creating unacceptable customer-treatment or control exceptions has not succeeded.

Chapter 22 — Commercial principles

In one minute

Pricing cannot be responsibly decided from public information. Portfolio size, ageing, channels, staffing, technology scope, integrations, current cost, baseline and risk allocation are unknown. The document therefore defines principles rather than a price.

Commercial archetypes

Model	Strength	Risk	Appropriate use
Fixed platform and operating fee	Predictable and supports essential control investment	Weak direct outcome alignment	Foundation, minimum team and platform service
Per-account or capacity fee	Scales with workload	Can reward volume rather than resolution	When account states and workable population are clear
Success fee	Strong outcome alignment	Conduct pressure, easy-cohort bias and baseline disputes	Only with strict definitions, guardrails and reconciled evidence
Gain-share above baseline	Pays for measured improvement	Entirely dependent on baseline integrity	After a defensible pilot/baseline
Hybrid fixed plus performance	Funds reliable operation while sharing upside	More governance and calculation detail	Recommended direction after discovery

Recommended principle

Fund the minimum platform, compliance and operating capability with a predictable component, then link a controlled variable component to independently defined and reconciled outcomes, subject to customer-treatment and service guardrails.

No commercial model should reward contact volume alone or allow financial targets to bypass complaints, hardship, cessation or conduct rules.

Part VI — Milestones And Roadmap

Chapter 23 — Milestones to date

In one minute

The proposal is credible because both sides bring operating history: TEKUN Corporation brings established collection relationships and domain authority; our team brings years of live multi-stakeholder platform operation and a modern connected ecosystem. The partnership itself remains proposed.

Dual-track history

Period	TEKUN Corporation evidence	Our platform-operating evidence
2014	TCorp states corporate registration	—
2015	TCorp collection call centre established	—
2018	—	Sifututor live tutoring operation begins using its previous system
2018–2024	TCorp collection service continues	Live operations accumulate service, participant and finance rules
May 2025	—	New SIMS goes live in production
2025–2026	—	Specialised staff tools, apps, communications, analytics, monitoring and recovery expand around the core
May–August 2026	Awqaf Education and MOCCIS appointments/agreements announced	Connected operating foundation continues to mature
2026 proposed next	Evaluate an integrated platform and managed service partnership	Apply proven platform disciplines to a dedicated collection domain

[CLM-001] [CLM-004] [CLM-013–016] [CLM-HIS-001–002]

Chapter 24 — Detailed partnership roadmap

In one minute

The roadmap advances when evidence says the next level is safe and valuable. It does not publish fragile dates or completion percentages. Discovery may later attach delivery windows after portfolio access, legal direction, data quality and resources are confirmed.

Foundation and controlled pilot

Horizon	Objective	Principal capabilities	Dependencies	Business impact	Evidence gate
H0 — Align and baseline	Establish shared truth and lawful operating boundary	Current-state lifecycle; portfolio segmentation; provider/system map; RACI; regulatory/privacy map; KPI definitions; pilot cohort	TCorp access; compliance/counsel; anonymised data	Removes design ambiguity and makes measurement fair	Signed discovery pack; baseline and controls accepted
H1 — Trusted operating foundation	Make one bounded portfolio visible, controlled and auditable	Principal/account core; intake; roles; queues; interaction log; payment evidence; export; monitoring; recovery plan	H0; secure data transfer; policy templates	One dependable operating record	Data reconciliation accepted; access tests pass; restore demonstrated; users trained

Horizon	Objective	Principal capabilities	Dependencies	Business impact	Evidence gate
H2 — Controlled pilot operation	Run authorised work with enforceable treatment controls	Verification; contact limits; notices; promises; complaints; disputes; hardship/legal holds; cessation; QA; representative records	H1; approved scripts/notices; staffing/authorisation; payment feed	Consistent execution and first TEKUN-specific results	Full cycle; outcome evidence; guardrails inside threshold; no unresolved critical control failure

Scale and governed expansion

Horizon	Objective	Principal capabilities	Dependencies	Business impact	Evidence gate
H3 — Integrated performance scale	Extend across a principal or broader cohort	Automated feeds; reconciliation; approvals; principal reporting; capacity planning; service governance; onboarding playbook	H2 evidence; integration owners; commercial approval	More capacity and clearer cost/performance	Principal accepts reporting; service and reconciliation targets stable
H4 — Multi-principal growth	Replicate safely across appointing organisations	Configurable principal policy; segregated reports/portals; onboarding templates; cross-principal control monitoring	H3 stability; principal agreements; isolation proof	More principals without proportional reinvention	Each principal passes policy, data, isolation and reconciliation acceptance
H5 — Governed intelligence and expansion	Turn accumulated evidence into stronger decisions	Cohort insight; quality analytics; explainable assistance; forecasting; optional channels and portfolio types	Clean history; human oversight; legal/ADMP review; mature controls	Better strategy, reduced avoidable work and stronger growth proposition	Assistance/models validated, monitored, explainable and approved

Cross-horizon rules

- Customer-treatment and compliance evidence can stop expansion even when recovery improves.
- A failed or ambiguous pilot is adjusted, re-baselined or stopped safely.

- TEKUN ownership, documentation, usable export and transition readiness are maintained at every horizon.
- New principals reuse the onboarding pattern but receive their own policy, data and acceptance.
- AI is later leverage, not the foundation; humans retain consequential authority.

Chapter 25 — Long-term partnership value

In one minute

The relationship should become durable because it keeps producing measurable value—not because TEKUN Corporation cannot leave. The strongest advantages accumulate through operating experience, integrations, trained people, trusted governance and portfolio intelligence.

How value compounds

Value asset	First proof	How it deepens
Measurable outcomes	Pilot scorecard	Comparable history across cohorts and principals
Operating knowledge	Initial playbooks	Evidence of which strategies work for which portfolio conditions
Trained teams	Authorised pilot team	Coaching, competency history and reusable leadership capacity
Integrations	First data/payment feeds	Hardened interfaces and faster new-principal onboarding
Governance	Forums and authority matrix	Trusted decisions, audit evidence and predictable escalation
Reliability	Service and restore evidence	Longitudinal availability and incident learning
Portfolio intelligence	Baseline and cohort reporting	Cross-period insight without compromising principal segregation

Transition-ready by design

TEKUN Corporation should be able to leave cleanly with everything it needs—and choose to stay because the partnership is valuable. This strengthens procurement, audit and governance confidence while making continuous performance the reason to renew. Maintain from day one:

1. complete usable data export;
2. current configuration and data dictionary;
3. integration specifications;
4. operating procedures and runbooks;
5. open case, promise, dispute, hardship and legal registers;
6. full permitted interaction and decision history;
7. change and decision logs;
8. a tested transition plan and agreed assistance terms.

Part VII — Decisions And Assurance

Chapter 26 — Discovery and decision agenda

In one minute

The public research is sufficient to define the opportunity, but private operating facts determine the actual solution. Discovery should begin with objectives and regulatory/authority boundaries, then move through portfolios, current providers/systems, customer treatment, money flow, data and the pilot.

Tier-1 agenda

Area	Decisions required before detailed design
Direction	Priority outcomes, main constraint and 12-month success definition
Regulatory	Applicable pathway per portfolio; current authorisation/application/declaration status; partner authority model
Principals	Active organisations, product types, contracts and reporting needs
Portfolio	Accounts, value, ageing, geography, history and data quality
Current operation	Channels, teams, queues, strategies, notices, promises and escalation
Providers/systems	Existing provider roles, contracts, allocation, systems and integration constraints
Customer treatment	Identity, contact, complaints, hardship, disputes, vulnerability and cessation
Money flow	Payment destination, receipt/statement, reconciliation authority and stop event
Data/privacy	Data flows, controller/processor roles, hosting, access, retention, breach and export
Pilot	Cohort, baseline, comparator, outcomes, guardrails and decision gate

The meeting-ready 24-question guide is maintained separately in the planning pack. Raw personal data is not required during initial discovery.

Chapter 27 — Risk, assurance and transition readiness

In one minute

Assurance is the evidence that ownership, policy and controls work in real operation. It includes prevention, detection, response, recovery, audit and clean transition.

Assurance model

Question	Evidence expected
Are only authorised people acting?	Identity, role, competency and authorisation records
Are actions permitted now?	Notice, contact, consent, hold and authority gates
Was the customer treated fairly?	Interaction record, quality sample, complaint/hardship handling
Is a collection result real?	Reconciled payment evidence and cohort definition
Did payment stop action correctly?	Cessation timestamp and post-stop exception report
Is each principal separated?	Access/isolation tests and principal-scoped reporting
Can an incident be understood?	Monitoring, audit, incident and breach evidence
Can service recover?	Backup health, recovery objectives and restore test
Can TEKUN govern or transition?	Documentation, export and annual transition exercise

Claims that always require owner approval

- financial results, savings, profit, targets or pricing;
- active principal, portfolio or account figures;
- provider names and contract terms;
- legal applicability, registration or compliance conclusions;
- data-role and DPO conclusions;
- launch dates, staffing levels and service commitments;
- certifications and externally shareable security statements.

Chapter 28 — Recommended next step

The recommended next action is a governed discovery programme with TEKUN Corporation leadership, collection operations, compliance/legal/privacy, finance/reconciliation and technology/data stakeholders.

The output should be one agreed current-state and pilot-design pack containing:

- | | |
|--|---|
| 1. collection lifecycle and stakeholder map; | 5. baseline, KPI and guardrail definitions; |
| 2. portfolio and principal segmentation; | 6. bounded pilot cohort and evidence gate; |
| 3. authority, regulatory and privacy responsibility map; | 7. solution scope, transition approach and implementation sequence; |
| 4. system, provider, data and money-flow architecture; | 8. commercial inputs without premature pricing. |

Proposed decision: Authorise discovery and pilot co-design. Commit to full implementation only after the evidence, authority and commercial gates are satisfied.

Reference Appendices

Appendix A — Glossary

Term	Plain-language meaning
Account	The customer's financing obligation and associated balance/history
Ageing	Grouping overdue amounts or accounts by how long they have been past due
Authoritative system	The agreed place whose record controls a particular fact or state
Authorised representative	A person permitted to perform defined collection activity for the accountable entity
Baseline	The agreed starting performance and conditions used for comparison
Case	The work record through which an account is assigned, contacted, followed up and resolved
Cessation	Stopping collection activity after a qualifying settlement, arrangement or other event
Cohort	A fixed group of accounts measured together from a stated starting point
Collection rate	Amount collected against a precisely defined amount due, population and period
Conduct guardrail	A customer-treatment or compliance measure that performance may not override
Controller / processor	Legal roles describing who determines data purposes/means and who processes for another; counsel confirms actual roles
Hardship hold	A protected state that pauses relevant escalation while hardship is assessed
Multi-principal	One operation serves multiple appointing organisations with separated policies, data and reporting
PAR	Portfolio at risk beyond a stated number of days; definition must state threshold and balance treatment
Principal	An organisation appointing TEKUN Corporation and owning or governing the underlying credit relationship
Promise to pay	A recorded customer commitment to pay a defined amount by a defined date/method
Reconciliation	Matching payment evidence to the correct account and resolving differences

Term	Plain-language meaning
Recovery rate	Amount recovered from a named frozen arrears cohort divided by its opening value
Representative competency	Evidence that a representative remains suitable, trained and able to perform authorised work
Right-party contact	A conversation with the verified customer, not merely a successful call connection
Roll rate	The share of accounts moving into a worse ageing state
Tenant/principal isolation	Controls preventing one organisation from accessing another's data or actions
Transition readiness	The ability to hand over data, configuration, documents and open work cleanly

Appendix B — Capability requirements catalogue

Minimum trusted operation

1. Principal and portfolio segregation.
2. Role-based access and representative validity.
3. Account, balance, ageing and point-in-time history.
4. Controlled intake and provenance.
5. Work queue, case assignment and supervisor override.
6. Identity-verification gate.
7. Interaction log for every attempt and outcome.
8. Approved reminders/notices and delivery evidence.
9. Contact-window and frequency enforcement where applicable.
10. Consent and third-party-disclosure controls.
11. Promise-to-pay and follow-up.
12. Payment evidence and reconciliation without agent receipt of money.
13. Complaint, dispute and hardship workflows.
14. Settlement/arrangement cessation and protected holds.
15. Approval workflows for consequential decisions.
16. Audit trail and usable export.
17. Monitoring, incident handling, backup and restore evidence.
18. Compliance and principal reporting.

Growth capability

- 19. Automated principal data feeds and validation.
- 20. Payment-provider/principal reconciliation integration.
- 21. Configurable treatment paths by principal and cohort.
- 22. Capacity and workforce planning.
- 23. Representative training, quality and annual-assessment management.
- 24. Principal portals and scheduled reporting packs.
- 25. Standard onboarding/offboarding kit.
- 26. Regulatory/credit-reporting submission support where confirmed.
- 27. Access anomaly detection and investigation.
- 28. Field/legal coordination if authorised and required.

Advanced capability

- 29. Cohort and strategy performance insight.
- 30. Explainable prioritisation with human review.
- 31. Assisted summaries and quality sampling.
- 32. Expected-payment and capacity forecasting.
- 33. Cross-principal trend insight using properly governed, segregated data.
- 34. New portfolio/product/channel support after legal and operating gates.

Appendix C — Authority and unresolved decisions

Decision	Default proposed boundary	Confirmation owner
Platform ownership	TEKUN Corporation owns and governs	TCorp/contract
Portfolio authority	Defined per principal contract	TCorp + principal + counsel
Partner collection authority	Only authorised activity inside approved policy	TCorp + counsel/regulator as required
Settlement/restructure	Partner recommends; authorised TCorp/principal role decides	TCorp + principal
Write-off	No partner independent authority	TCorp + principal + finance
Legal escalation	No representative/partner independent authority	TCorp + principal + legal

Decision	Default proposed boundary	Confirmation owner
Payment receipt	Representatives never receive customer money	TCorp + finance + counsel confirm recipient flow
Reconciliation authority	Authoritative finance/payment evidence	TCorp + principal finance
Data roles	Not predetermined	TCorp/principal/partner privacy and counsel
Regulatory submission	Accountable submitting entity named per obligation	TCorp compliance/counsel
New principal onboarding	TEKUN Corporation approval plus acceptance gate	TCorp

Appendix D — KPI dictionary starter

Every KPI record must include name, business meaning, numerator, denominator, population, period, source, exclusions, owner, frequency, target type and gaming/misinterpretation risk.

ID	Indicator	Owner	Required interpretation safeguard
O1	Contact coverage	Collection manager	Pair with contact-frequency compliance; volume is not quality
O2	Right-party contact rate	Collection manager	Data quality and identity rule affect result
O3	Promise-to-pay rate	Collection manager	Pair with kept promises; promises can be over-recorded
O4	Kept-promise rate	Collection manager/finance	Fix amount/date tolerance and use reconciled evidence
O5	Time to first substantive action	Collection manager	Define substantive to prevent trivial-action gaming
F1	Reconciled amount collected	Finance	Exclude reversals, dishonoured and misapplied payments
F2	Collection rate	Finance	State due amount, cohort, period and exclusions
F3	Recovery rate	Finance	Freeze opening cohort and adjustment rules
F4	Net recovery	Finance	Agree attributable cost method
F5	Cost-to-collect	Finance	Segment by portfolio mix and arrears age

ID	Indicator	Owner	Required interpretation safeguard
P1	Ageing/PAR	Finance	State threshold, balance and restructure treatment
P2	Roll rate	Collection manager	Requires reliable point-in-time snapshots
P3	Cure rate	Collection manager	Separate payment cure from restructure cure
T1	Complaint rate	Compliance	A low rate can also indicate inaccessible intake
T2	Complaint resolution time	Compliance	Track ageing and overdue cases, not only closed average
T3	Hardship outcome/timeliness	Compliance	Approval rate alone is not a quality measure
T4	Cessation compliance	Compliance	Every exception requires investigation
C1	Contact-window exceptions	Compliance	Target and applicable rule set confirmed
C2	Identity-verification exceptions	Compliance	Debt discussion population must be reliable
C3	Contact-frequency exceptions	Compliance	Count across all integrated channels
C4	Notice-gate compliance	Compliance	Validate mandatory fields and delivery evidence
C5	Third-party disclosure exceptions	Compliance/privacy	Consent and relationship evidence required
C6	Payment-handling exceptions	Compliance	Representatives receiving payment should be zero where rule applies
C7	Representative validity/competency	Compliance/operations	Active population and due dates must be current
C8	Data-access anomalies	Privacy/security	Track investigation and closure, not alerts alone
H1	Critical-workflow availability	Platform operations	Measure safe journey, not homepage only
H2	Incident restore time	Platform operations	Segment by severity
H3	Recovery proof freshness	Platform operations	Successful backup is not a successful restore
H4	Reconciliation ageing	Finance/platform	Pair value with item count and cause
S1	Principal onboarding lead time	TCorp management	Start/end conditions must be written
S2	Capacity headroom	TCorp management	Quality and conduct remain constraints

Appendix E — Tier-1 discovery questions

1. What outcomes does TCorp most want to improve, in priority order?
2. What is the main operating constraint today?
3. What would make the partnership successful to management, board and principals?
4. Which regulatory pathway applies to each portfolio type, in TCorp's view, and what is the current status?
5. Which activities could a partner perform, under what authorisation?
6. Who holds settlement, restructure, write-off, legal and closure authority?
7. Which complaints, hardship, conduct and reporting processes are mandatory from day one?
8. Which appointing organisations and portfolios are active?
9. What products, volumes, value, ageing, geography and history are involved?
10. How are accounts assigned, updated, suspended, returned and closed?
11. Which activities are performed by TCorp staff?
12. Are external providers used for operations, people, technology, channels, data, payment, field or legal work?
13. What does each provider do and what are the transition/contract constraints?
14. Which systems support the lifecycle today?
15. How are queues and treatment strategies defined and approved?
16. How are identity, contact, notice, consent, promises and cessation evidenced?
17. How are complaints, disputes, hardship, vulnerability and legal holds handled?
18. How are representatives trained, authorised, supervised and assessed?
19. Where do customers pay and what event stops collection?
20. Who reconciles payment, in which system and cycle?
21. What data arrives from each principal and what quality issues matter?
22. Which integrations exist or are required?
23. What privacy roles, hosting, retention, breach, export and audit constraints apply?
24. Which cohort and scorecard should govern a bounded pilot?

Appendix F — Evidence and source register

TEKUN Corporation and regulatory evidence

The detailed 114-claim register and 36-source register are maintained in the governed research pack. The most important sources are:

Source	Use	Freshness
TEKUN Corporation official company and credit-management pages	Identity, business, call-centre date, MOF statement and appointing-organisation statement	Reverify before external use
TEKUN Corporation official 2026 news releases	Awqaf Education and MOCCIS announcements	Reverify before external use
Consumer Credit Act 2025 (Act 873)	Definitions, authorisation, conduct offences, exclusions and transition	Recheck with counsel/official text
Consumer Credit Commission FAQs and media releases	Commencement, phases, application opening and complaints route	Monthly while implementation evolves
SKP Authorisation Standards 2026	Registration criteria, finance and reporting expectations	Reverify before external use
SKP Conduct Standards 2026	Collection, complaints, hardship, competency and data controls	Reverify before external use
Personal Data Protection Amendment Act 2024 and official guidelines	Controller/processor, DPO, breach and security framework	Confirm applicability and current guidance

Sifututor capability evidence

Claim family	Approved use
CLM-HIS-*	Live service since 2018; new SIMS went live May 2025
CLM-ARCH-*	Authoritative core, managed interfaces and controlled system relationships
CLM-SYS-*	Current system/capability profiles with safe-use limitations
CLM-ANA-001	Curated, policy-controlled owner analytics
CLM-TRU-*	Monitoring, testing, release controls and human accountability
CLM-RES-001	Point-in-time composed recovery proof; no universal guarantee
CLM-AI-001	Responsible AI direction, not certification

Material open facts

- current external providers and their terms;
- current TCorp collection platform and integrations;
- portfolio/account volume, value and ageing;
- performance baseline and cost-to-collect;
- money flow and reconciliation authority;

- portfolio-specific regulatory applicability and TCorp authorisation status;
- data roles, hosting and DPO requirements;
- partner authorisation/registration model;
- staffing, channel and field/legal scope;
- procurement and commercial envelope.

Appendix G — Assumption and contradiction log

ID	Working assumption or tension	Treatment
A1	TCorp retains major consequential authority	Confirm per principal; design configurable approvals
A2	Customers pay an approved entity/channel, never a representative	Confirm actual flow; keep agent receipt prohibited in design where applicable
A3	Data roles may differ by portfolio and agreement	Map flows and obtain legal/privacy conclusion
A4	A complaints intake exists because TCorp publishes a complaint form	Confirm operational process and system
A5	Current collection is mainly call-centre based	Confirm channels, volumes and field/legal activity
A6	Reconciliation is principal- or jointly controlled	Confirm source and timing before KPI/commercial design
A7	Each principal has distinct policy	Configure for difference; simplify only after evidence
A8	Partner personnel may act under a TCorp model	Do not commit until counsel/regulator position is confirmed
CON-1	Secondary material misstated the Part V transition direction	Primary Act/MOF/SKP evidence governs; reverify before use
CON-2	Motor-dealer identity does not prove assigned product	Keep Phase 2 relevance conditional
CON-3	Absence of public provider/baseline evidence does not prove absence	Ask neutrally; never claim none exists

Appendix H — Stakeholder-safe extraction checklist

Before content becomes a slide, memo or externally shared excerpt:

- ☐ Correct legal entity is named: TEKUN Corporation, not TEKUN Nasional, unless the parent relationship is the subject.
- ☐ Established facts, proposed design and future direction remain visibly distinct.
- ☐ Current provider, system, portfolio, money flow and baseline are not invented.
- ☐ Legal applicability, authorisation, data role and compliance are not declared without approval.
- ☐ No guaranteed recovery, profit, revenue or savings statement appears.
- ☐ Sifututor capability is not presented as prior debt-collection performance.
- ☐ Customer-treatment guardrails remain beside performance claims.
- ☐ Roadmap horizons are not converted into dates or completion percentages without approval.
- ☐ Security and architecture are described without sensitive topology or access detail.
- ☐ TEKUN ownership, usable export and transition readiness remain explicit.
- ☐ Volatile public facts are reverified.
- ☐ Commercial figures and confidential discovery data have owner approval.

Closing perspective

TEKUN Corporation already has the relationships and operating history of a collection business. Our contribution is the ability to turn complex multi-stakeholder work into a connected, governed and continuously improving operating platform.

The strongest partnership is therefore neither “software supplied” nor “collection outsourced.” It is a jointly governed capability:

TEKUN Corporation owns the platform and direction. Our team supplies the technology, authorised operating execution and improvement discipline. Together, the parties build measurable capacity that can serve more principals while protecting customer treatment, evidence and long-term trust.

That value must be earned first through discovery and a bounded pilot, then expanded only when the evidence is strong enough.
